Questions/Key Ideas

Notes

How have we found slope so far?

rise
run

the change in the y's
the change in the x's

How do you find slope using two points?

Let's use what we know about finding slope from tables:

x	y
1	2
3	5

(1, 2) and (3, 5)

$$\frac{y_2 - y_1}{x_2 - x_1} = \text{_____} = \text{_____}$$

- When given _____
- Example: Find the slope between the points $(-3, 4.3)$ and $(21, 16.3)$

$$\underline{\hspace{10em}} = \underline{\hspace{10em}} = \underline{\hspace{10em}}$$

Summary:
